DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1 - 7, drawn to a MOS transistor with a particular gate electrode insulating film, classified in class 257, subclass 288.
- II. Claims 8 - 19, drawn to the making of a MOS transistor with a particular gate electrode insulating film, classified in class 438, subclass 238.

2. The inventions are distinct, each from the other because of the following reasons: inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, unpatentability of the group II invention does not necessarily imply unpatentability of the group I invention, because the device of the group I invention could be made by a process materially different from that of the group II invention. For example, the process prescribed in claim 8 can be materially altered, by utilizing plasma oxidation instead of a gas-based method.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
